

2V0-31.21 Exam Dumps - Try Best 2V0-31.21 Exam Questions from Training Expert ExamsLabs [Q51-Q70]

2V0-31.21 Exam Dumps - Try Best 2V0-31.21 Exam Questions from Training Expert ExamsLabs
Practice Examples and Dumps & Tips for 2022 Latest 2V0-31.21 Valid Tests Dumps

VMware 2V0-31.21 Exam Syllabus Topics:

TopicDetailsTopic 1- Describe the Use Case of Integrating Terraform with vRA- Describe the different types of vRealize Automation deploymentsTopic 2- Describe the architecture of vRealize Automation- Differentiate between vRealize Automation vs vRealize Automation cloudTopic 3- Manage Capability and Constraint Tags- Manage the Identity and Access Management tabTopic 4- Create Service Broker Content Sources- Manage Extensibility- Subscription (ABX- vRealize Orchestrator)Topic 5- Describe Different Types of Tags in vRealize Automation- Prepare the pre-requisites for the installation (DNS, NTP, Service Accounts etc.)Topic 6- Configure Code Stream Endpoints and Basic Pipelines- Perform a simple installation using vRealize Easy InstallerTopic 7- Install SaltStack Config using vRealize Suite Lifecycle Manager- Perform manual installation using Lifecycle Manager (Workspace ONE Access and vRealize Automation and vRA Environ Scale Out)

NO.51 The Quickstart wizard executes multiple actions when submitted.

What is one of the actions that is always executed by the Quickstart wizard? (Choose the best answer.)

- * Send approval notification
- * Create an Active Directory integration
- * Request a deployment from a machine catalog item
- * Execute subscriptions for an event topic

NO.52 An administrator is preparing to install vRealize Automation using the standard deployment option. For which three components must the administrator create a DNS record? (Choose three.)

- * vCenter Server
- * VMware Identity Manager
- * vRealize Suite Lifecycle Manager
- * vRealize Automation Load Balancer
- * VMware Identity Manager Load Balancer
- * vRealize Automation

This multi-organization configuration assumes single node deployments for the following components:

Lifecycle Manager

Workspace ONE Access Identity Manager

vRealize Automation

<https://docs.vmware.com/en/vRealize-Automation/8.1/administering-vrealize-automation.pdf>

NO.53 An administrator is configuring vRealize Automation to generate a unique machine naming convention for the deployed resources.

The machine name should meet the following criteria:

XXX-YYY-ZZZ-##

XXX – Cloud Zone

YYY – Server Function

YYY – Application

– 2-digit running number

Which component should the administrator use to configure this policy? (Choose the best answer.)

- * Cloud zones
- * Machines
- * Projects
- * Capability tag

NO.54 An administrator configures cloud accounts for vSphere, Amazon Web Services and Google Cloud Platform.

Each public cloud account has a single region configured, with a single cloud zone associated with each.

Company policy states that all development workloads should be deployed to the public cloud and all production workloads should be deployed to vSphere. The administrator wants to ensure that when creating cloud templates for this project an appropriate constraint tag is specified to meet the placement policy and that App-Dev users are allowed to select whether to deploy the machine to production or development. The tagging strategy states that development environments should be tagged with `dev`; and production environments should be tagged with `prod`;

Which two actions should the administrator take to ensure the objective is met? (Choose two.)

- * Add a capability tag to each cloud account, using `env:prod` as the key/value pair.
- * Add a capability tag to each public cloud zone, using `env:dev` as the key/value pair.
- * Add a capability tag to each vSphere cloud zone, using `env:dev` as the key/value pair.
- * Add a capability tag to each vSphere cloud zone, using `env:prod` as the key/value pair.
- * Add a capability tag to each public cloud zone, using `env:prod` as the key/value pair.

NO.55 An administrator installs vRealize Automation using the vRealize Easy Installer.

What is the correct URL to log in to the vRealize Automation user interface? (Choose the best answer.)

- * `https://vRA_FQDN/org/`
- * `https://console.cloud.vmware.com/`
- * `https://vRA_FQDN/`
- * `http://vRA_FQDN/`

NO.56 The vRealize Orchestrator Service runs as a Kubernetes pod within each vRealize Automation appliance.

Which three containers make up the vRealize Orchestrator Service? (Choose three.)

- * `vco-server`
- * `vro-controlcenter`
- * `vco-inventory`
- * `vco-controlcenter`
- * `vco-polyglot-runner`
- * `vro-server`

NO.57 An administrator is trying to create a new set of image mappings that will map to vSphere templates that have been added to an existing vCenter Server cloud account. When the administrator tries to select the Windows Server 2016 image, nothing appears on the list. The administrator has confirmed that the vSphere template exists in the correct location within vCenter Server.

Which action should the administrator take to be able to create the new image mapping? (Choose the best answer.)

- * Validate the vCenter Server cloud account credentials.
- * Check to make sure image synchronization is successful for the vCenter Server cloud account.
- * Make sure the correct NSX endpoint is selected for the vCenter Server cloud account.
- * Add a new capability tag to the vCenter Server cloud account.

NO.58 While deploying a virtual machine cloud template, an administrator encounters the following error:

```
Error: com.vmware.xenon.common.LocalizableValidationException: Unable to find a valid subnet for network 'Network_External' of type 'EXISTING' with constraints '[dc.metro, tier:1]', reasons: [Network profile 'publicnet / Metro' was skipped because [Network [Network_External] allocation: cannot allocate a network with static IP ranges for profile 'publicnet / Metro'.]]
```

Where should the administrator start to troubleshoot? (Choose the best answer.)

- * Projects
- * Network Profiles
- * Tags
- * Cloud Zones

NO.59 Which vRealize Automation service is a development- and process-automation platform that supports extensibility and Anything-as-a-Service (XaaS) features in vRealize Automation?

- * Cloud Assembly
- * Service Broker
- * Code Stream
- * vRealize Orchestrator

With the vRealize Orchestrator integration to Cloud Assembly, you deploy a cloud extensibility proxy instance, that can be used for extensibility subscriptions and XaaS (Anything as a Service) operations used for cloud templates.

<https://docs.vmware.com/en/VMware-Cloud-Assembly/services/Using-and-Managing/GUID-6EF5FAA7-4480-4A1C-A0E5-5388369863A8.html>

NO.60 An administrator wants to use constraint tags to deploy cloud templates to a particular storage with a capability tag assigned; however, not all projects have access to this storage.

Which two tag formats can be defined at the cloud template level in order to ensure that cloud templates are deployed on this particular storage, whenever possible, and fail if not available? (Choose two.)

- * value:key
- * key:value:soft
- * !key:value
- * key:value:hard
- * key:value

NO.61 Which option should an administrator configure to implement storage profiles in cloud templates? (Choose the best answer.)

- * Cloud zones
- * Flavor mappings
- * Projects
- * Tags

NO.62 While deploying a virtual machine cloud template, an administrator encounters the following error:

```
Error: com.vmware.xenon.common.LocalizableValidationException: Unable to find a valid subnet for network 'Network_External' of type 'EXISTING' with constraints '[dc:metro, tier:1]', reasons: [Network profile 'publicnet / Metro' was skipped because [Network [Network_External] allocation: cannot allocate a network with static IP ranges for profile 'publicnet / Metro'.]]
```

Where should the administrator start to troubleshoot? (Choose the best answer.)

- * Projects
- * Network Profiles
- * Tags
- * Cloud Zones

<https://virtualrove.com/2020/07/23/vmware-vrealize-automation-8-1-part4-network-profiles/>

NO.63 Which two components can be used to add a directory for identity and access management? (Choose two.)

- * vCenter Server
- * vRealize Operations
- * VMware Identity Manager
- * vRealize Automation
- * vRealize Suite Lifecycle Manager

NO.64 An administrator creates a custom form for a RHEL cloud template. A user reports only being able to see the standard form when requesting the cloud template.

Which step should the administrator take to resolve this issue?

- * Enable the custom form for the RHEL cloud template.
- * Enable the custom form feature in Service Broker.
- * Enable the custom form feature in Cloud Assembly.
- * Enable the custom form in the project for the RHEL cloud template.

Service Broker – Content & Policies – Content – pick one blue print content and there are 3 little dots and a left side submenu for each content, click Customize Form – after Customization click Enable Custom forms is not a feature that have to be enabled on the Service Broker level. They are enabled on a per-catalog item basis so this answer makes the most sense.

NO.65 Which step must an administrator take when performing a vRealize Automation manual installation using Lifecycle Manager? (Choose the best answer.)

- * Set up a certificate in the certificate locker
- * Configure storage policies
- * Configure an additional network interface
- * Integrate Active Directory

NO.66 When deploying the SaltStack Config service using vRealize Suite Lifecycle Manager, which construct is automatically created in Cloud Assembly to assist in deploying SaltStack Config minions using cloud templates?

- * A custom resource
- * A secret
- * A custom role
- * A property group

<https://blogs.vmware.com/management/2021/02/vrealize-automation-8-3-and-saltstack-config-technical-overview.html>

NO.67 An administrator must restrict the amount of memory resources available for a specific group of users. On which component would the administrator configure this?

- * Projects
- * Cloud Zones
- * Flavor Mappings
- * Cloud Accounts

NO.68 An administrator will use the vRealize Automation Code Stream Smart Templates to trigger pipeline testing when there are code changes in GitHub.

Which template should the administrator use? (Choose the best answer.)

- * Continuous Delivery
- * Cloud Template
- * Blank Canvas
- * Continuous Integration

NO.69 What are three advantages of using vRealize Automation Cloud over vRealize Automation on-premises? (Choose three.)

- * The ability to run action based extensibility (ABX)
- * Support for deploying workloads to public clouds
- * Does not require any additional components to deploy and manage on-premises workloads
- * License key is not required
- * Earlier access to new features
- * Reduce infrastructure maintenance and patching time

NO.70 An administrator needs to create a custom form for a cloud template that has just been created. One of the form input fields needs to be a drop-down that is populated through an external source.

Which vRealize Automation service must the administrator use to complete this task? (Choose the best answer.)

- * Service Broker
- * Orchestrator
- * Cloud Assembly
- * Code Stream
