* Installed on all systems, even those not commonly affected by malware
* Installed on all systems commonly affected by malware
* Configured to allow users to disable it as desired
* Updated at least annually

## How to Prepare for PCI PCIP3.0 Exam **Preparation Guide for PCI PCIP3.0 Exam Introduction**

The Payment Card Industry (PCI) applies to credit, debit, prepaid, e-purse, ATM, and POS cards and related firms. The Payment Card Industry consists of all the companies that store, process and transmits cardholder's data, particularly for the credit cards and debit cards. The Payment Card Industry Security Standards Council develops the Payment Card Industry Security Standards that are used all over the industry. Individual card brands develop regulatory standards that are used by service providers and provide their regulatory systems. China UnionPay, American Express, MasterCard, Japan Credit Bureau, Visa and Discover Financial Services are some major card brands in the world. Members banks connect and allow transactions from the card brands and thus are used by many organizations. However, few card brands do not use member banks for instance American Express, instead of using member banks they operate as their banks.

The objective of the Payment Card Industry Security Standards Council (PCI SSC) is to improve the security of the global payment account data by developing standards and supporting services that drive education, awareness, and effective stakeholder implementation. The Payment Card Industry Data Security Standard is an information security standard for the companies that control cards from different brands. The Payment Card Industry Security Standards Council administers the Payment Card Industry Standards and is mandated by the card brands. To decrease credit card fraud the Payment Card Industry Standards were created to increase regulations around cardholder's data.
