[Oct 13, 2022] Latest SK0-005 PDF Dumps & Real Tests Free Updated Today
SK0-005 Dumps With 100% Verified Q&As - Pass Guarantee or Full Refund

What is the importance of the CompTIA SK0-005 Certification Exam

CompTIA SK0-005 Certification Exam is the all time favorite. The actual exam tests your knowledge and skills to perform critical IT support tasks. It verifies that you have the fundamental knowledge and proven skills in areas of server installation, configuration, and upgrading; server functionality; storage; troubleshooting; preventative maintenance; and basic networking. The CompTIA Server+ certification exam objectives cover the most important elements of general system management, storage, and networking concepts as well as specific details about hardware.

CompTIA Server+ is an internationally recognized vendor neutral certification that demonstrates competency in server issues and technology. This certification covers the latest server technologies including virtualization, security and network-attached storage.

CompTIA SK0-005 exam dumps will help you to pass the exam.

The SK0-005 Certifications are highly demanded across large and small IT organizations across the world. Hiring managers prefer candidates who not only have an understanding of the topic and experience, but having Training certifications in the subject. All the CompTIA SK0-005 Certification Exam are available at the successfully pass this exam, you will earn a valuable credential that validates your ability to work with any major brand of servers.

We offer free PDF and simulator update material pack to our client and generate to pass the current customer exam with correct

pack. Report to the technician administrator to change phase traffic operation for proper virtual production cluster capacity to conduct power supplies reporting load with the help of technician port syslog program.

NO.62 Which of the following is the MOST appropriate scripting language to use for a logon script for a Linux box?

- * VBS
- * Shell
- * Java
- * PowerShell
- * Batch

Reference:

<https://redmondmag.com/articles/2016/02/09/logon-scripts-for-active-directory.aspx>

NO.63 A server administrator must respond to tickets within a certain amount of time. The server administrator needs to adhere to the:

- * BIA.
- * RTO.
- * MTTR.
- * SLA.

NO.64 Which of the following must a server administrator do to ensure data on the SAN is not compromised if it is leaked?

- * Encrypt the data that is leaving the SAN
- * Encrypt the data at rest
- * Encrypt the host servers
- * Encrypt all the network traffic

NO.65 Following a recent power outage, a server in the datacenter has been constantly going offline and losing its configuration. Users have been experiencing access issues while using the application on the server. The server technician notices the data and time are incorrect when the server is online. All other servers are working. Which of the following would MOST likely cause this issue? (Choose two.)

- * The server has a faulty power supply
- * The server has a CMOS battery failure
- * The server requires OS updates
- * The server has a malfunctioning LED panel
- * The servers do not have NTP configured
- * The time synchronization service is disabled on the servers

NO.66 An administrator recommends using a tower server in a small remote office. Which of the following should be added to the server to ensure continuous server operation?

- * Surge protector
- * PDU
- * UPS
- * Ground strap

NO.67 A server administrator needs to deploy five VMs, all of which must have the same type of configuration. Which of the following would be the MOST efficient way to perform this task?

- * Snapshot a VM.
- * Use a physical host.
- * Perform a P2V conversion.

- * Use a VM template.

Deploying a virtual machine from a template creates a virtual machine that is a copy of the template. The new virtual machine has the virtual hardware, installed software, and other properties that are configured for the template.

NO.68 A server technician has received reports of database update errors. The technician checks the server logs and determines the database is experiencing synchronization errors. To attempt to correct the errors, the technician should FIRST ensure:

- * the correct firewall zone is active
- * the latest firmware was applied
- * NTP is running on the database system
- * the correct dependencies are installed

NO.69 A server technician is installing a new server OS on legacy server hardware. Which of the following should the technician do FIRST to ensure the OS will work as intended?

- * Consult the HCL to ensure everything is supported.
- * Migrate the physical server to a virtual server.
- * Low-level format the hard drives to ensure there is no old data remaining.
- * Make sure the case and the fans are free from dust to ensure proper cooling.

NO.70 Which of the following allows for a connection of devices to both sides inside of a blade enclosure?

- * Midplane
- * Active backplane
- * Passive backplane
- * Management module

NO.71 Which of the following actions should a server administrator take once a new backup scheme has been configured?

- * Overwrite the backups
- * Clone the configuration
- * Run a restore test
- * Check the media integrity

NO.72 A server administrator wants to run a performance monitor for optimal system utilization. Which of the following metrics can the administrator use for monitoring? (Choose two.)

- * Memory
- * Page file
- * Services
- * Application
- * CPU
- * Heartbeat

NO.73 Which of the following policies would be BEST to deter a brute-force login attack?

- * Password complexity
- * Password reuse
- * Account age threshold
- * Account lockout threshold

Reference:

<https://sucuri.net/guides/what-is-brute-force-attack/>

NO.74 A server administrator is experiencing difficulty configuring MySQL on a Linux server. The administrator issues the `getenforce` command and receives the following output:

># Enforcing

Which of the following commands should the administrator issue to configure MySQL successfully?

- * setenforce 0
- * setenforce permissive
- * setenforce 1
- * setenforce disabled

Reference:

<https://blogs.oracle.com/mysql/selinux-and-mysql-v2>

NO.75 Which of the following would MOST likely be part of the user authentication process when implementing SAML across multiple applications?

- * SSO
- * LDAP
- * TACACS
- * MFA

Reference:

<https://www.onelogin.com/learn/how-single-sign-on-works>

NO.76 Users have noticed a server is performing below Baseline expectations. While diagnosing the server, an administrator discovers disk drive performance has degraded. The administrator checks the diagnostics on the RAID controller and sees the battery on the controller has gone bad. Which of the following is causing the poor performance on the RAID array?

- * The controller has disabled the write cache.
- * The controller cannot use all the available channels.
- * The drive array is corrupt.
- * The controller has lost its configuration.

NO.77 A USB drive has been purchased to move files between Windows, *nix, and Macintosh servers. Which of the following filesystems is the BEST choice to ensure the drive can read and be written to by all of the servers?

- * ext2
- * FAT32
- * NTFS
- * UFS

NO.78 A user reports that a server is not accessible. A technician sees the following message on the server: PXE server not found. Which of the following should the technician attempt FIRST to resolve the issue?

- * Ensure the network cable is properly connected and reboot the server.
- * Eject the disk in the CD-ROM and reboot the server.
- * Enter the BIOS and correct the boot sequence on the server.
- * Power down the server and reseal the PCI cards.

NO.79 Which of the following can be BEST described as the amount of time a company can afford to be down during recovery from an outage?

- * SLA
- * MTBF
- * RTO
- * MTTR

Reference:

<https://whatis.techtarget.com/definition/recovery-time-objective-RTO>

NO.80 After configuring IP networking on a newly commissioned server, a server administrator installs a straight-through network cable from the patch panel to the switch. The administrator then returns to the server to test network connectivity using the ping command. The partial output of the ping and ipconfig commands are displayed below:

```
ipconfig/all

IPv4 address: 192.168.1.5
Subnet mask: 255.255.255.0
Default gateway: 192.168.1.2

Pinging 192.168.1.2 with 32 bytes of data:

Reply from 192.168.1.2: Request timed out
Reply from 192.168.1.2: Request timed out
Reply from 192.168.1.2: Request timed out
Reply from 192.168.1.2: Request timed out
```

The administrator returns to the switch and notices an amber link light on the port where the server is connected. Which of the following is the MOST likely reason for the lack of network connectivity?

- * Network port security
- * An improper VLAN configuration
- * A misconfigured DHCP server
- * A misconfigured NIC on the server

NO.81 An administrator needs three distinct security zones in a company's network. Which of the following is the administrator MOST likely to implement?

- * Host-based firewalls
- * A Layer 3 firewall
- * A web application firewall
- * A circuit-based firewall

NO.82 The Chief Information Officer (CIO) of a datacenter is concerned that transmissions from the building can be detected from the outside. Which of the following would resolve this concern? (Choose two.)

- * RFID
- * Proximity readers
- * Signal blocking
- * Camouflage
- * Reflective glass
- * Bollards

RFID is an acronym for radio-frequency identification; and refers to a technology whereby digital data encoded in RFID tags or smart labels (defined below) are captured by a reader via radio waves.

Proximity readers work by constantly emitting a short range radio frequency (RF) field. When a proximity card comes within range of this field, an integrated chip within the card is powered up and the chip transmits a card number back to the reader. Not all proximity cards are born equal though, and it is important that the differences are weighed up when making a decision about which

technology to adopt.
