SAP C_HCDEV_01 Exam Description:

The "SAP Certified Development Associate - SAP HANA Cloud 1.0" certification exam verifies that the candidate has the knowledge to develop native software applications running on the SAP Business Technology Platform using the SAP HANA Cloud DB. This certificate builds on the basic knowledge gained through related SAP HANA Cloud training. The training covers the development tools and a programming model, used to realize the different parts of a software application in SAP HANA Cloud.

Q38. Which part of the MTA development descriptor file contains API keys?

* Global elements
* Modules
* Resources
* Properties

Q39. Which major logical areas are involved when working with files locally in Git?Note: There are 3 correct Answers to this question.

* Local Git repository
* Working directory
* Central Git repository
* Staging area
* Team repository

Q40. Which feature of domain modeling can you use to model document structures through contained-in relationships?

* Associations
* Entities
* Namespace
* Compositions

Q41. What is mandatory when working on public Git in a distributed environment?

* Connect to a central repository to share your project contribution.
* Keep the entire history of your project locally.
* Buy the software license on the Git website.
* Block the piece of code you are working on in the central repository.

Q42. What properties can you set in the procedure header when developing a procedure?Note: There are 3 correct Answers to this question.

* Begin/end statements
* Language (SQLScript/R)
* Read/write access
* Expression
* Security (invoker/definer)

Q43. As developer of an SAP HANA Cloud application, what do you define in the Application Security Descriptor file?

* Roles
* Authorizations
* Scopes
* Privileges

Q44. Why should you register an error handler in your service implementation for the exception of the CAP SDK for Node.js?

* To force the execution of the CRUD operation
* To provide a meaningful error message
* To ensure that the end user receives a message
* To avoid a break in the app execution

Q45. In the Run Configurations view, you can see the available dependencies as defined in the package.json file.To which of the following can you bind or unbind these dependencies?Note: There are 3 correct Answers to this question.

* User-provided service
* SAP HANA Cloud database

* Local database
* External OData service
* SAP Job Scheduling service

Q46. What can you use to register the JavaScript implementation of an event handler for external services to the framework?
* An inline function passed to result of cds.serve()
* An @impl annotation in your CDS model file
* A .js file with the same name as the .cds file
* An inline function passed to result of cds.connect()

Q47. Which APIs are used by the event handler to interact with remote or database services?Note: There are

2 correct Answers to this question.
* Querying
* Construct
* Messaging
* Reflection

Q48. Which design time files can you create in an SAP HANA database module?Note: There are 3 correct Answers to this question.
* .hdbcalculationview
* .yaml
* .hdbprocedure
* .hdinamespace
* .cds

Q49. Which request headers values are passed when the scheduler invokes the endpoint?Note: There are 2 correct Answers to this question.
* req.headers.connection
* x-sap-job-id
* req.headers.authorization
* x-sap-job-schedule-id

Q50. How do you define an entity for a business application that supports multiple languages dynamically?Note: There are 2 correct Answers to this question.
* The entity attributes that need to support multiple languages need to be marked with a special keyword called localized.
* A text table gets created for each entity that has attributes defined as localized.
* The entity that needs to support multiple languages needs to be marked with a special keyword called localized.
* A text table gets created for each entity attribute that is defined as localized.

Q51. You are debugging a procedure and you want to do the following:Delete all breakpoints.Run the program to the end.Do NOT plan any further debugging activity.What is the sequence of steps you should follow?
* (a)Remove all breakpoints in the debugger pane.(b)Detach the debugger from the running application.(c)Resume module execution.
* (a)Detach the debugger from the running application.(b)Remove all breakpoints in the debugger pane.(c)Resume module execution.
* (a)Detach the debugger from the running application.(b)Resume module execution.(c)Remove all breakpoints in the debugger pane.
* (a)Remove all breakpoints in the debugger pane.(b)Resume module execution.(c)Detach the debugger from the running application.

Q52. What are the aspects of a Multi-Target Application (MTA) model in the lifecycle management of distributed applications?
Note: There are 3 correct Answers to this question.
* Integration
* CI/CD
* Configuration
* Composition
* Dependencies

Q53. What is contained within the Application part of the index.html?
* Service references
* Primary UI anchor
* Initial construction
* Configurations of files to be loaded

Q54. You have to define name-space rules for a Core Data Service (CDS) entity.Which file do you use?
* .hdbcds
* .hdinamespace
* .cds
* .hdiconfig

Q55. Why do you use request objects in the event handlers?Note: There are 3 correct Answers to this question.
* To give information on the HTTP method
* To call external services
* To register another set of handlers
* To send an arbitrary event
* To provide error messages to the client

Q56. Which Node.js module do you use to run an SQL statement against the SAP HANA database?
* @sap/xssec
* @sap/xsenv
* @sap/hdbext
* @sap/hdi

Q57. Which of the following annotations provides the most fine-grained control for Core Data Services (CDS) security?
* @restrict
* @readonly
* @insertonly
* @requires

Q58. Which of the following deployment option of persistence models offer quick development and test cycles?
* Global
* Local
* Virtual
* Persistence

Q59. Which actions are executed in Cloud Foundry under the Deploy & Execute phase when you run an application? Note: There are 3 correct Answers to this question.
* Copy the application image to the BLOB store.
* Release the application and provide the metadata information.
* Execute service wiring to dependent services.

* Download required libraries/dependencies.
* Start a new container with the application image.

Q60. You are using Git in SAP Business Application Studio for version control. You have initialized Git and would like to include the files in your new local repository.What command do you use?

* git add
* git commit
* git push
* git init
