

## [Apr 23, 2023] Get Unlimited Access to NSE6\_FAD-6.2 Certification Exam Cert Guide [Q18-Q37]

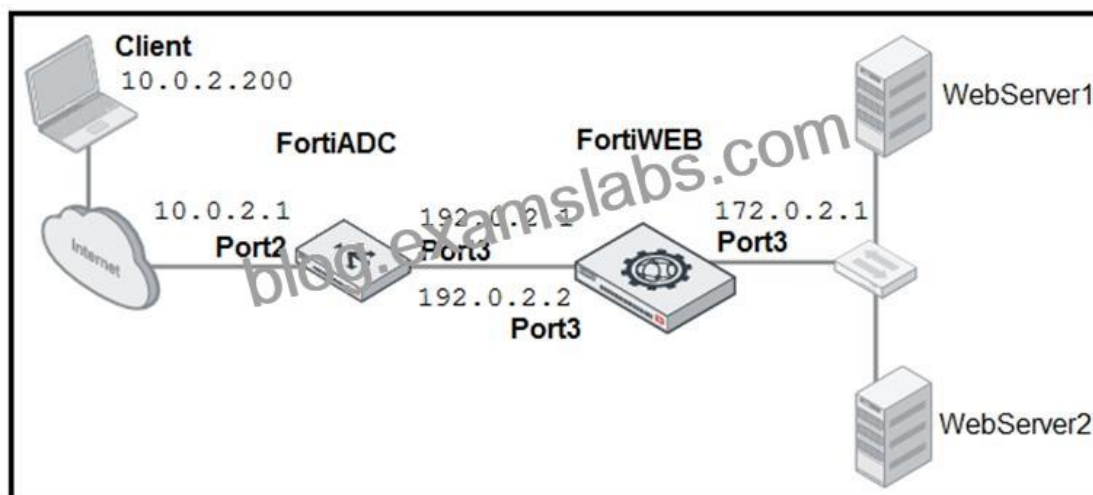

[Apr 23, 2023] Get Unlimited Access to NSE6\_FAD-6.2 Certification Exam Cert Guide  
Reliable Study Materials for NSE6\_FAD-6.2 Exam Success For Sure

### Fortinet NSE6\_FAD-6.2 Exam Syllabus Topics:

TopicDetailsTopic 1- Manage multi-vdom deployments- Server Load Balancing- Configure load balancingTopic 2- Configure virtual servers, real servers, server pools, and health checks- Configure SSL offloading, acceleration and inspectionTopic 3- Use REST API for system management- Deployment and System ConfigurationTopic 4- Advanced Networking and Security- Identify deployment requirementsTopic 5- Configure WAF and web vulnerability scanning- Configure global server load balancing

**NO.18** Refer to the exhibit.

FortiADC is applying SNAT to all inbound traffic going to the servers. When an attack occurs, FortiWeb blocks traffic based on the 192.0.2.1 source IP address, which belongs to FortiADC. The setup is breaking all connectivity and genuine clients are not able to access the servers.

What must the administrator do to avoid this problem? (Choose two.)

- \* Enable the Use X-Forwarded-For setting on FortiWeb.
- \* No Special configuration is required; connectivity will be re-established after the set timeout.
- \* Place FortiWeb in front of FortiADC.
- \* Enable the Add X-Forwarded-For setting on FortiWeb.

**NO.19** An administrator wants to implement load balancing persistence by configuring FortiADC to prefix the server ID to an existing cookie sent by the back-end servers.

Which persistence method should the administrator use?

- \* Hash cookie
- \* Insert cookie
- \* Persistence cookie
- \* Embedded cookie

**NO.20** A web administrator wants to configure a new virtual server to deliver HTTP content to end users.

Which three components are mandatory to accomplish this? (Choose three.)

- \* Load balancing method
- \* Real server pool
- \* Server persistence
- \* Health check
- \* Application profile

**NO.21** Which two FortiADC features can you use to harden the device and server security? (Choose two.)

- \* Connection limits
- \* Web filtering
- \* Antivirus scanning
- \* FortiGuard IP reputation

**NO.22** Which two statements about Layer 7 application delivery control are true? (Choose two.)

- \* It provides more intelligent traffic distribution decisions
- \* It provides the fastest traffic processing
- \* It supports only IPv4
- \* It requires more packets to make a decision

**NO.23** An administrator is managing a web site that uses specialized servers for streaming, in addition to servers that handle HTTP traffic.

To make sure that specialized servers handle the streaming traffic, what FortiADC capacity should they use?

- \* Persistence rules
- \* Content routing
- \* Dynamic load balancing
- \* HTTP compression

**NO.24** Which two configuration actions are possible when protecting application delivery servers from clients with IP addresses in the IP reputation database? (Choose two.)

- \* Automatically create a WAF profile based on the traffic
- \* Redirect the traffic to a different URL
- \* Block the traffic.
- \* Analyze the traffic using WVS rules

**NO.25** An administrator has configured all the back end servers with a maximum warm-up state rate.

Under which two conditions is the maximum rate enforced by FortiADC? (Choose two.)

- \* As long as a server keeps replying to the health Check
- \* When multiple health check methods have been configured for a server and some of them are failing but at least one is up.
- \* When the status of a server is set to Enabled from Maintain or Disabled
- \* During a warm-up period, when a server is back online after a health check downtime

**NO.26** When using FortiADC in a global load balancing configuration, in which two ways do general DNS settings differ from a global DNS policy? (Choose two.)

- \* Traffic not matching a global DNS policy is served by the general DNS settings
- \* Traffic matching source or destination criteria is served by the general DNS policy.
- \* Traffic matching the zone, as well as both source and destination criteria, is served by the global DNS policy.
- \* Traffic not matching general DNS settings is served by a matching global DNS policy.

**NO.27** An organization has decided to automate specific tasks by leveraging the FortiADC REST API. The tasks will perform updates to existing items.

Which REST API method should you use to update existing items on FortiADC?

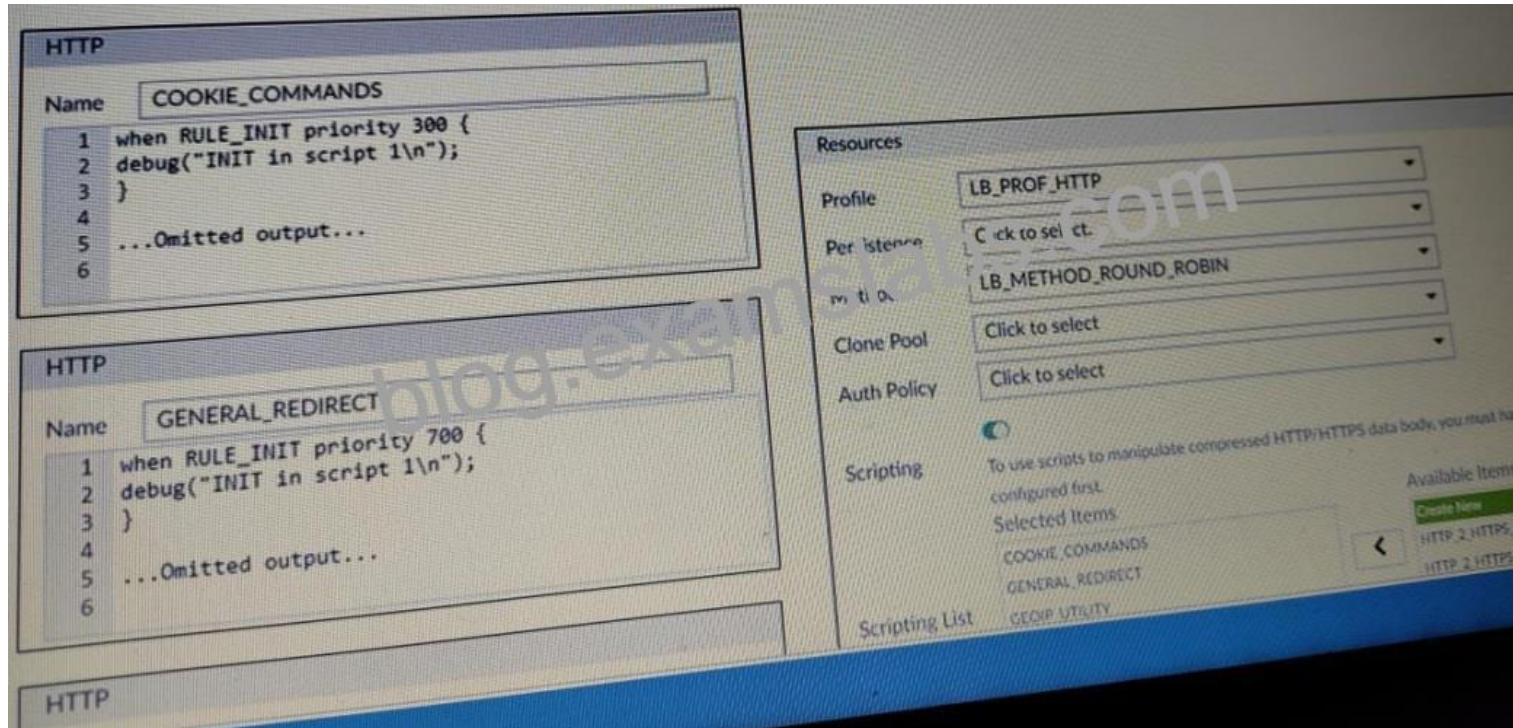

- \* PATCH
- \* POST
- \* GET
- \* PUT

**NO.28** Which three types of content can you optimize using a page speed profile? (Choose three.)

- \* Streaming
- \* Image

- \* CSS
- \* Video

**NO.29** Refer to the exhibit.

The exhibit shows the first few lines of three scripts, and a virtual server configuration leveraging these scripts.

Based on the way FortiADC prioritizes script execution, in what order will the scripts execute?

- \* COOKIE\_COMMANDS, GENERAL\_REDIRECT, GEOIP\_UTILITY
- \* COOKIE\_COMMANDS< GEOIP\_UTILITY, GENERAL\_REDIRECT
- \* GEOIP\_UTILITY, GENERAL\_REDIRECT, COOKIE\_COMMAND
