

2023 Realistic C_IBP_2305 Dumps are Available for Instant Access [Q11-Q26]

2023 Realistic C_IBP_2305 Dumps are Available for Instant Access Download Exam C_IBP_2305 Practice Test Questions with 100% Verified Answers Q11. How many different time levels can be selected within one planning view?

- * Only base time levels of the planning area
- * All time levels available in the time profile
- * All time levels available in the time profile, restricted by global configuration parameter
- * Only time levels from the base planning level of selected key figures

Q12. What is taken as an input for the demand sensing process?Note: There are 2 correct answers to this question.

- * Forecast Accuracy measures
- * Results of time series analysis
- * Open Sales Orders
- * Consensus Demand

Q13. You need to use your resource cost effectively with a certain minimum use, even if it means producing more than demand.Which solutions would apply to this scenario?Note: There are 2 correct answers to this question.

- * Capacity leveling will be possible for production and storage resources.
- * Balance can be achieved between excessive prebuild and minimum use by incorporating violation costs.
- * Excess stock can be generated and will need to be staged in an overflow warehouse.

* Minimum capacity utilization will result in pull production occurring.

Q14. You are setting up planing with lot sizes.What are some of the properties of lot sizes that you need to be aware of?Note: There are 2 correct answers to this question.

- * Lot sizes are applicable for production and handling quantities.
- * Periodic lot size setting overrides the minimum lot size.
- * Lot sizes are time-independent master data settings.
- * Lot sizes are applicable for production and transportation quantities.

Q15. Which of the following solutions should be satisfied with violations penalized by the objective function of the time-series supply optimizer? Note: There are 3 correct answers to this question. Not adhering to maximum transport values

- * Violation of minimum aggregated inventory values
- * Violation of minimum resource utilization
- * Not respecting production capacity
- * Not-fully satisfied demands

Q16. Which of the following checks for master data and key figures does the Check Mode algorithm trigger?Note: There are 3 correct answers to this question.

- * It checks whether the location products specified in the master data are connected by customer sourcing rules within the supply chain network.
- * It checks whether the location resource specified in the master data forms a cycle in the supply chain network.
- * It checks whether the sourcing in the Production Source Item Master Data type exists.
- * It checks whether the heuristic detects cycles formed by nodes (such as location products) in the supply chain network.
- * It checks whether the required planning level master data exists for a subset of input key figures.

Q17. Where can the results of a Time Series Analysis be used?Note: There are 2 correct answers to this question.

- * During XYZ segmentation in the Manage ABC/XYZ Segmentation Rules app
- * In Global (multi-stage) Inventory Optimization to calculate time-phased Recommended Safety Stock Outputs
- * In the Manage Forecast Error Calculations app – Demand Planning app to calculate the Forecast Error CV
- * In the Microsoft Excel add-in, where you can use them to limit and filter your planning views

Q18. Forecast Error CV is an input to which of the following?

- * Time-Series-Based Supply Planning Optimizer
- * Calculate Target Inventory Components in Inventory Planning Profile Operator
- * Forecast Error Calculation in Inventory Planning Profile Operator
- * Multistage Inventory Optimization in Inventory Planning Profile Operator

Q19. What do you need to be aware of when using multiple pairs of key figures in one copy operator? Note: There are 2 correct answers to this question.

- * Copying multiple key figures can be processed sequentially.
- * If necessary source key figures values are disaggregated.
- * Copying multiple key figures on different planning levels is not possible.
- * If necessary target key figures values are disaggregated.

Q20. Which conditions have to be fulfilled as a prerequisite to maintain a key figure disaggregation?Note: There are 2 correct answers to this question.

- * The key figure is calculated and system editable.
- * The key figure is stored and all editable.
- * The key figure is stored and system editable.
- * The key figure is calculated and all editable.

Q21. What are the S&OP operator (optimizer) parameters associated with demand fair share?

- * Number of fair share segments Additional tiering costs (default) Number of fair share segments late delivery
- * Number of fair share segments Additional tiering costs (default) Inventory days of supply
- * Number of fair share segments Maximum days of coverage Number of fair share segments late delivery
- * Number of fair share segments Additional tiering costs (default) Maximum inventory

Q22. You need to integrate data from SAP S/4HANA and legacy ERP to SAP IBP. What are the integration tools that you can use with such a setup for data transfer? Note: There are 2 correct answers to this question.

- * Cloud Identity Authentication Service
- * Real-time Integration
- * Cloud Integration for Data Services
- * Smart Data Integration

Q23. Which parts of the S&OP high-level process would the Inventory planning and optimization process fit into? Note: There are 2 correct answers to this question.

- * Management business Review, by providing the inventory targets for endorsement
- * Demand Review, by using the output of demand planning as input into calculations
- * Supply Review, by providing an input to supply network planning
- * Reconciliation Review, by providing inventory parameters for one consolidated plan

Q24. You are reviewing the master data types that are often used for supply and inventory planning

. Which master data types are compound master data types? Note: There are 2 correct answers to this question.

- * SOURCELOCATION
- * SOURCECUSTGROUP
- * SOURCECUSTOMER
- * SOURCEPRODUCTION

Q25. Model configuration allows the attributes of a master data type to be assigned as key figures. Which features are relevant for this type of object?

- * This type of key figure is not usually stored and it cannot be set to editable.
- * This object is not exposed to the user in planning views or modeling.
- * This object contains user-defined criteria that monitor the running of business plans.
- * This object provides a single value for a unique planning combination.

Q26. The S&OP Operator Profiles app is used to configure different types of algorithms. Which algorithm-specific settings are unique for only the Time Series-based Supply Optimizer? Note: There are 2 correct answers to this question.

- * Time profile level
- * Discretization
- * Processing mode
- * Global cost factors
