[Sep 07, 2023] Fully Updated C-BOBIP-43 Dumps - 100% Same Q&A In Your Real Exam
Latest C-BOBIP-43 Exam Dumps - Valid and Updated Dumps

Q25. You want users belonging to a group called “Sales” to view report instances in a folder called “Asia”.

Where do you grant these rights?
* User Security for the “Asia” folder
* Application Security for the Central Management Console
* User Security for the “Sales” group
* Application Security for Crystal Reports

Q26. Which of the following recurrence patterns would require a calendar?
* Weekly on Tuesday
* Last three days and first Tuesday of every month
* Every second Monday of the month
* Monthly on day 15

Q27. Why would you configure a second Server Intelligence Agent (SIA) on the same host?
* To allow servers to be secured separately
* To allow servers to run under different network accounts
* To take over the management of the first SIA’s server if it fails
* To increase the processing capacity of the host

Q28. You schedule a publication that distributes a Web Intelligence report to an FTP destination. On which server do you define the details (hostname, port, credentials, and path) for the FTP location?
* Adaptive Processing Server
* Adaptive Job Server
* Web Intelligence Processing Server
* Central Management Server

Q29. A user views a page in a Crystal report that exists on a cache server. Which server receives the page from the cache server?

Please choose the correct answer.

Response:
* Crystal Reports Processing Server
* Input File Repository Server
* Output File Repository Server
* Web Application Server

Q30. You are experiencing errors in Web Intelligence across a clustered environment and need to perform an end-to-end trace to debug further. Where would you configure the global trace level settings to ensure that you retain enough traces?
* In the trace log properties of each Web Intelligence Processing Server.
* In the bo_trace.ini file located on the configuration directory of the BI installation.
* In each individual host operating system’s trace level settings.
* In the Next Step trace level within the SAP Client plug-in.

Q31. A user views a page in a Crystal report that exists on a cache server.

Which server receives the page from the cache server?
* Crystal Reports Processing Server
* Input File Repository Server
* Output File Repository Server
* Web Application Server

Q32. Your report has more records than the value set for “Database Records Read When Previewing or Refreshing” on the Crystal Reports Processing Server.

What happens when you refresh the report from the BI launch pad?
* The report returns partial results without a warning message.
* A user is prompted to edit the report.
* The report returns partial resultswith a warning message.
* An error message is displayed.

Q33. What are the recommendations for clustering multiple Central Management Servers (CMS)? Note: There are 3 correct Answers to this question.

* Each CMS host has same operating system version, including service packs and patches.
* All CMS are on the same local area network.
* Rename the cluster to the host name of the primary CMS.
* All CMS connect to the system database in the same manner.
* Each SIA node containing a CMS is running under a different operating system account.

Q34. What is required to initialize the Server Intelligence Agent (SIA)?
* Repository Data Store
* Auditing Data Store
* Bootstrap File
* Central Management Service

Q35. What is a dynamic recipient?
* An enterprise recipient to which multiple aliases have been assigned
* A publication recipient that is listed in an external document
* A publication recipient that has an alias in the business intelligence platform
* An enterprise recipient that is assigned to multiple profiles

Q36. What can you include when you install the SAP BusinessObjects Business Intelligence platform?

Note: There are 2 correct answers to this question.
* SAP Enterprise Resource Planning
* Web Application Server
* SAP Business Warehouse
* Lifecycle Manager

Q37. The Web Intelligence Processing Server has finished processing a document.

To which server is the document page sent so that it can be viewed?
* Output File Repository Server
* Adaptive Processing Server
* Adaptive Job Server
* Web Application Server

Q38. How can you create vertical scaling for BI Platform?
* Install redundant servers on the same host.
* Install redundant servers on an additional host.
* Increase the database storage capacity for the system database.
* Increase storage capacity for the filestore directories.

Q39. On a production system landscape, you need to perform maintenance on a host that is currently running scheduled jobs.

What action should you perform on the Adaptive Job Server before shutting down the host?
* Disable
* Force Termination
* Restart
* Enable

Q40. Your customer has a 4-node clustered BI environment with two Tomcat servers configured for load balancing in front of the nodes. What additional system functions should be configured to enable high availability in the BI platform? Note: There are 2

correct Answers to this question.
* Web Application Container Server
* Processing tier
* Server Groups
* Storage tier

Q41. You want to save a report to the BI Platform from SAP Crystal Reports for Enterprise and receive a Java null pointer error.
Which server must be available?
* Report Application Server
* Adaptive Processing Server
* Crystal Reports Processing Server
* Adaptive Job Server

Q42. Which of the following are recommended best practices for implementing security? Note: There are 3 correct Answers to this question.
* Assign rights to folders rather than individual objects where possible.
* Create custom access levels for reusability.
* Assign rights to groups rather than to users directly.
* Assign “Denied” rather than “Not Specified” for the Everyone group at the root level.
* Avoid using predefined access levels.

Q43. You want to manage versioning of your BI reporting objects. Which of the following third-party versioning tools are supported by the BI platform? Note: There are 2 correct Answers to this question.
* Monotone
* Apache Subversion
* Mercurial
* GitHub

Q44. Why would you configure a second Server Intelligence Agent (SIA) on the same host?
* Toallow servers to be secured separately
* To allow servers to run under different network accounts
* To take over the management of the first SIA’s server if it fails
* To increase the processing capacity of the host
