# 2023 Free SAP E-C4HYCP1811 Exam Files Downloaded Instantly [Q24-Q48

**2023 Free SAP E-C4HYCP1811 Exam Files Downloaded Instantly Pass SAP E-C4HYCP1811 exam Dumps 100 Pass Guarantee With Latest Demo**

SAP E-C4HYCP1811 certification exam is intended for candidates who want to verify their technical knowledge related to SAP Commerce Cloud. SAP Certified Product Support Specialist - SAP Commerce Cloud certification exam evaluates candidates on their understanding of how to support SAP Commerce Cloud's operations, troubleshoot different problems, restore productive service, and handle customer interactions. E-C4HYCP1811 exam is also intended to assess the candidate's ability to provide high-level support, solve complex problems, and handle critical situations.

To prepare for the SAP E-C4HYCP1811 exam, individuals can take advantage of a range of resources provided by SAP, including online courses, e-learning modules, and practice exams. They can also attend instructor-led training sessions, which are designed to provide a comprehensive overview of the exam topics and help individuals develop their skills and knowledge in the area of SAP Commerce Cloud.

**NO.24** You see the following entry in the thread dumps while analyzing a system's performance:ajp-8019- 43″

nid=183 state=WAITING &#8211; waiting on <0x515a41f6> (a org.apache.tomcat.util.net.JIoEndpoint$Worker) &#8211; locked <0x515a41f6> (a org.apache.tomcat.util.net.JIoEndpoint$Worker)at java.lang.Object.wait(Native Method)at java.lang.Object.wait(Object.java :485)at org.apache.tomcat.util.net.JIoEndpoint$Worker.await(JioEndpoint.java :471)at org.apache.tomcat.util.net.JIoEndpoint$Worker.run(JIoEndpoint.java :497)at java.lang.Thread.run(Thread.java:662)Locked synchronizers: count = 0 How do you interpret this thread dump?

* The Tomcat AJP parameter maxThreads is too small to handle simultaneous requests.
* The JVM option maxAJPThreads is too small to handle simultaneous requests.
* The thread is waiting for an incoming connection.
* The system is about to crash because the thread is blocked and cannot perform its job.

**NO.25** What must you do when you configure the OAuth2 for SAP Cloud Integration?Note: There are 3 correct answers to this question.

* Assign ROLE_CLIENT or ROLE_TRUSTED_CLIENT in the SAP Commerce Backoffice.
* Configure the token endpoint URL in the SAP BTP cockpit.
* Assign the ESBMessaging.Send role in the SAP Commerce Backoffice.
* Run an ImpEx to import the OAuthClientDetails and ExposedOAuthCredential type data in the SAP Commerce Backoffice.
* Create the secret client credentials in the SAP Commerce Backoffice.

**NO.26** Which scripting languages are supported by the Backoffice application in SAP Commerce?Note: There are 3 correct answers to this question.

* Groovy
* BeanShell
* Python
* JavaScript
* Bash

**NO.27** Where can you find the SAP knowledge Base to search for known issues? Choose Two correct answers.

* SAP help Portal
* SAP Community Network
* Ticketing tool
* SAP support Portal

**NO.28** In the SAP Commerce cache, how does invalidation work on a product type? Choose Two correct answers.

* At cached FlexibleSearch results where product type is included because the result set might have changed
* Cached product items updated during the import are invalidated in all connected hybris cluster nodes and are reloaded from the database when it is used next
* Cached product items uploaded during the import are invalidated only in the node where the import is running
* All cached FlexibleSearch results are invalidated form the query result region because the result set might have changed

**NO.29** What must you do before you can run CronJobs in SAP Commerce Cloud?

* Set a reference to a specific job implementation within the CronJob.
* Assign a CronJob to a group of nodes to run on a configured node group.
* Configure a trigger to run at a specified time.
* Assign a CronJob to run on a node with a specified ID.

**NO.30** SAP commerce receives a Java OOM (out of memory) exception. What should you do first? Choose Two correct answers.

* Analyze the access log file for frequent requests
* Increase the memory size
* Take a Java Heap Dump when the issue is detected
* Analyze the gc log file for object allocation

**NO.31** What should you do before you report incorrect software behavior to SAP (3rd level support)? Choose Two correct answers.

* Provide the complete technical environment information of the system where the incident occurred
* Test the issue on the customers SAP Commerce installation
* Tell the customer that the reported problem will be fixed in a future patch release
* Reproduce and validate the problem on the standard out of the box SAP Commerce

**NO.32** A new item type was added to an items.xml file named CarProcessDefinition. After the Ant build and SAP Commerce server startup, the following appears in the log file:15:56:54 **** [java] [m[0;31mERROR [main] [DefaultModelConverterRegistry] code CarProcessDefinition does not belong to known type. Maybe you have added a new type without updating your system.What does this message mean?

* The new item has been added without specifying a deployment table.
* The new item type will be created after a system update.
* The new deployment table has been added without specifying a new item.
* The Java class associated to the new item is missing.

**NO.33** Your customer reports an incident where the SAP Commerce system crashes in production. What would you ask for? Choose Two correct answers.

* The database dump from the production system
* The thread dumps taken right before the crash
* The specific scenario to reproduce the issue
* The thread dumps taken after system reboot

**NO.34** You are deploying the OAuth2 user credentials in SAP Cloud Integration.Where do you configure the OAuth Client data?

* SAP Commerce Backoffice|SAP Cloud Integration Web UI
* SAP BTP cockpit|SAP Cloud Integration Web UI
* SAP Commerce Backoffice|Administration Console
* SAP BTP cockpit|SAP Commerce Backoffice

**NO.35** Where can you check the SAP Commerce platform version?Note: There are 2 correct answers to this question.

* In the bin/platform/build.number file.
* In the bin/platform/project.properties file.
* In the Administration Console.
* In the command line by running the ant-version.

**NO.36** How does SAP Commerce use the LDAP protocol? Choose Two correct answers.

* SAP commerce converts LDAP query results to impex
* SAP commerce imports user and group data from an external LDAP system
* SAP Commerce writes actions to the connected LDAP system
* SAP Commerce can use the DSML protocol within LDAP

**NO.37** Which of the following cases should you treat as a support incident?Note: There are 2 correct answers to this question.

* A partner contacts Product Support for assistance with a custom solution.
* A partner contacts Product Support regarding a platform with slow performance.
* A partner requests information on how to customize the backoffice.
* A partner needs specialized advice regarding the architectural aspects of a project.

**NO.38** Your customer is planning to use a postgreSQL database for a new project.Where do you confirm the third-party compatibility? Choose the correct answer.

* SAP App Center

*  SAP Support Portal
*  SAP Community
*  SAP Commerce official product documentation

**NO.39** What must you do when you provide a workaround for a code glitch in an existing service, for example, ProductService?Note: There are 3 correct answers to this question.
*  Modify the existing bean definition with the new service.
*  Add a new bean definition with a new ID for the new service.
*  Implement a new custom service by extending the existing service.
*  Override the alias of the original bean definition.
*  Replace all injections with a new ID for the new service.

**NO.40** How do you configure SAP Commerce cluster settings?Note: There are 2 correct answers to this question.
*  Specify exactly the same cluster settings for each node in the

%HYBRIS_BIN%/config/local.properties file.
*  Specify the cluster settings in the %HYBRIS_BIN%/config/local.properties file for each cluster node.
*  Set the cluster.node.autodiscovery to True in order to enable cluster ID autodiscovery.
*  Specify the cluster settings of each cluster node in the

%HYBRIS_BIN%/config/tomcat/conf/server.xml file.

**NO.41** What do you use to persistently enable or disable JDBC logging? Choose the correct answer.
*  SAP Commerce Administration Console
*  Backoffice Administration Cockpit
*  Java Code
*  Configuration properties file

**NO.42** How does SAP Commerce use the LDAP protocol?Note: There are 2 correct answers to this question.
*  SAP Commerce converts LDAP query results to ImpEx.
*  SAP Commerce imports user and group data from an external LDAP system.
*  SAP Commerce can use the DSML protocol within LDAP.
*  SAP Commerce writes actions to the connected LDAP system.

**NO.43** You see the following entry in the thread dumps while analyzing a systems performance: ajp-8019-43&#8243; nid=183 state=WAITING -waiting on <0x515a41f6> ( a org apache tomcat until.net.JioEndpooints$Workder) -locked <0x515a41f6> ( a org.apache.tomcat.util.net.JioEndpoint$workder) At java lang Object wait(Native Method) At Java.lang Object wait(Object.java.485) At org.apache.tomat.util.net JioEndpoint$Worker.await(JioEndpoint.java.4710) At.org.apache tomcat util. net JioEndpont$Workder.run(JioEndpoint.java:497) At java.langThread.run (Thread.java.662) Locked synchronizers count=0 How do you interpret this thread dump? Choose the correct answer.
*  The Tomact AJP parameter maxThreads is too small to handle simultaneous requests
*  The thread is waiting for an incoming connection
*  The system is about to crash as the thread is blocked and cannot perform its job
*  The JVM option maxAJPThreads is too small to handle simultaneous requests

**NO.44** What must you do when you provide a workaround for a code glitch in a existing service. For example, ProductService. Choose Three correct answers.
*  Implement a new custom service by extending the existing service
*  Add a new bean definition with new ID for the new service
*  Override the alias of the original bean definition

* Replace all injections with a new Id for the new service
* Modify the existing bean definition with the new service

**NO.45** You need to run a FlexibleSearchService query to get results without restrictions.To whom do you assign the session?Note: There are 2 correct answers to this question.

* Admin user
* Any user that does NOT have any restrictions
* Anonymous user
* Any member of the admingroup

**NO.46** Which actions do you perform to use the EDMX schema?Note: There are 3 correct answers to this question.

* Use the <Association> &#8230; </Association> tag as a representation of the relationship between entity types.
* Use ComplexType and EdmSimpleType as part of the <Association> &#8230; </Association> tag.
* Define the structure of the payload that the Integration API will support for both inbound and outbound requests.
* Update the EDMX schema by downloading it, changing it, and re-uploading it within the SAP Commerce Backoffice.
* Use odata2webservices to get the EDMX schema for the integration object.

**NO.47** SAP Commerce receives a Java OOM (out of memory) exception.What should you do first?Note: There are 2 correct answers to this question.

* Analyze the gc.log file for object allocation.
* Take a Java heap dump when the issue is detected.
* Analyze the access.log file for frequent requests.
* Increase the memory size.

**NO.48** A customer reports a performance problem with DefaultStockService. After checking the customer&#8217;s system by running SELECT COUNT(*) FROM {StockLevelHistoryEntry}, you discover that there are hundreds of millions of instances of StockLevelHistoryEntry.What would you do to resolve this performance issue?Note: There are 2 correct answers to this question.
* Delete the content of the StockLevelHistoryEntry table directly from the database to immediately improve performance.
* Implement a CronJob that will clean the StockLevelHistoryEntry table according to customer business needs.
* Suggest an improvement by creating a maintenance request for the customer.
* Run Cleanup Type System in the SAP Commerce Administration Console.
